

## **CUSTOMER ANNOUNCEMENT**

### **ITW McMurdo Budget 'D' and Special 'D' Connectors** **CHANGE TO ZINC PLATED SHELLS**

The Budget 'D' and Special 'D' connectors with zinc and yellow passivated shells currently have the familiar matt yellow / green tint. These parts are RoHS compliant but still contain hexavalent chrome within the limits permitted by the RoHS directive.

In line with our policy of continuous improvement ITW McMurdo is planning to eliminate the use of hexavalent chrome entirely from these products.

This will mean that the colour of the shells will change from the yellow / green tint to a silvery / zinc colour. This change will be automatically phased in over the next few months.

If it is essential that the yellow / green colour be retained, then please contact our Sales Office who will be able to give advice on the availability of alternative products.
